

Latest Version of Bitdefender Antivirus for Mac

This article provides information on the build version delivered with the latest Bitdefender Antivirus for Mac product update. It also shows you how to manually update the Bitdefender antivirus installed on your Mac.

Current version of Bitdefender Antivirus for Mac

Bitdefender Antivirus for Mac needs to be updated daily, and it frequently updates its signatures multiple times within a day. However, when it comes to product updates that involve changing the version number, they occur less frequently. These updates are important for improving product performance, adding new features, and enhancing security.

The most recent version number of Bitdefender Antivirus for Mac is **10.3.2.3** and was released on May 13, 2026.

Note: This version will be rolled out gradually over the coming weeks. Once it becomes available on your device, Bitdefender Antivirus for Mac will recommend restarting your system so you can take full advantage of the new version's benefits.

Manual update guide

Click the corresponding option below to learn how to check the build version of your Bitdefender product or update the antivirus app on macOS:

How to check what build number you are on

To find out the version / build number of the Bitdefender Antivirus for Mac app installed on your Mac:

1. Click the **B** icon in the menu bar and choose "Open Main Window" to bring up Bitdefender Antivirus for Mac.
2. Click **Antivirus for Mac** in the top menu bar.
3. Choose **About Antivirus for Mac**.
4. The **Version** number is displayed below Bitdefender Antivirus for Mac.

How to update Bitdefender Antivirus for Mac

Automatic update

The automatic update is enabled by default. If you are connected to the Internet and Bitdefender Shield is enabled in Preferences > Protection, Bitdefender Antivirus for Mac checks for software updates every hour. When an update is detected, it is automatically downloaded and installed on your Mac.

Manual update

You can also perform manual updates at any time. An active Internet connection is required to check for available updates and download them. To check for updates manually:

1. Click the **B** icon in the menu bar and choose **Open Antivirus interface** to bring up Bitdefender Antivirus for Mac.
2. Click **Actions** in the top menu bar.
3. Choose **Update threat information database**. Or hold down at the same time the **Command** ⌘ key and the **U** key.
4. Bitdefender will check for updates.
5. If an update is available, it is automatically downloaded and installed on your Mac. The update process might take a while.

6. When a product update is available (product updates include app improvements and bug fixes) a pop-up window will inform you to restart the system. Click Restart to upgrade or manually restart the Mac.
