

How to Use Safepay: Bitdefender's Secure Browser for Online Transactions

Bitdefender Safepay is a secure, dedicated browser built into Bitdefender's Windows security solutions. Designed to protect your online transactions, Safepay shields your sensitive data from hackers and malicious software. It's not available as a standalone app or for operating systems other than Windows.

What is Bitdefender Safepay?

Safepay creates a protected browsing environment specifically for secure activities like online banking, shopping, or accessing sensitive accounts. Safepay protects against all e-threats that target your banking data such as hacking, [phishing](#), packet analysis, "man-in-the-browser" and "[man-in-the-middle](#)" attacks, [Trojans](#), system changes, etc. While browsing in Safepay you don't risk being spied on or having your passwords stolen. Malicious [keyloggers](#) can't record what you type on your keyboard and send reports over the Internet to hackers. Safepay also prevents malware to take screenshots and detects fraudulent websites. The web-filtering technology ensures that you never land on a harmful website. Bitdefender Safepay also comes with a built-in VPN that secures your confidential data even on public Wi-Fi networks.
