

A Guide to Bitdefender Scam Protection Pro

Protecting yourself against online scams is becoming increasingly challenging. Scammers now use AI to trick people into giving away money, personal information or to gain unauthorized access to systems. As a member of the [Global Anti-Scam Alliance](#), Bitdefender is committed to protecting consumers worldwide from the growing threat of online scams. In line with this mission, Bitdefender has developed the industry's first all-in-one scam protection layer.

What is Scam Protection Pro?

Scam Protection Pro is Bitdefender's all-in-one scam protection service with automatic threat detection, real-time alerts, and trusted AI help, included with the following Bitdefender subscriptions, both individual and family versions:

- Bitdefender Premium Security
- Bitdefender Ultimate Security
- Bitdefender Ultimate Security Plus
- Bitdefender Ultimate Small Business Security

Supported devices

Works on all major platforms:

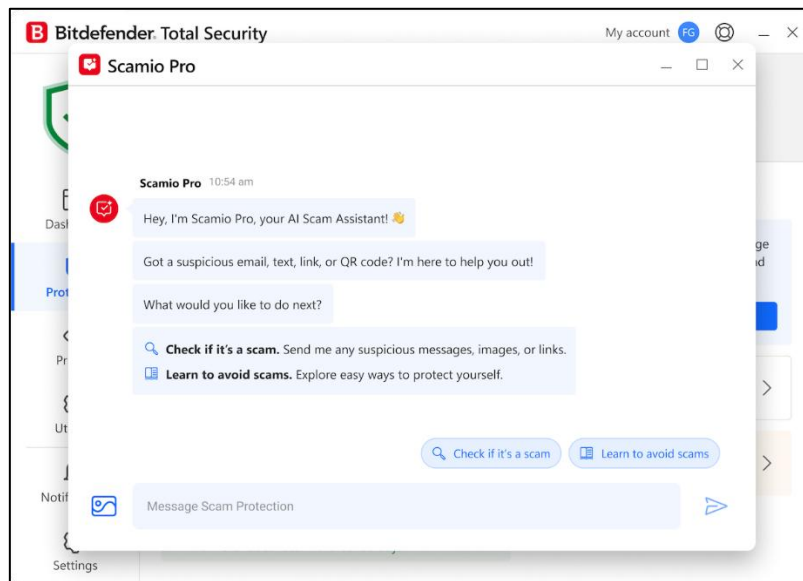

- [Windows](#) (except Windows Server)
- [macOS](#)
- [Android](#)
- [iOS](#)

Easy to set up and use, with the same look and feel across all devices.

Scam Protection Pro Features

Scamio Pro

- Scamio Pro is an advanced AI assistant that helps you check for scams and gives expert cybersecurity advice so you can stay safe online.
- It can check any link, QR code, message, email, image or screenshot.
- It also provides educational snippets and safety recommendations.

Scam Radar

- Scam Radar continuously monitors local scam activity. When a new scam begins to spread, you're notified right away.

- Its purpose is preventive: if you've activated Scam Radar, you'll receive proactive alerts when a high-risk scam wave is detected nearby, often spreading through coordinated text messages or fake Facebook ad campaigns.
- Each alert is designed to help you recognize and avoid the scam. It includes a sample of the fraudulent content (such as a text message or Facebook ad preview), highlights key warning signs or suspicious keywords, and offers practical tips to stay protected.

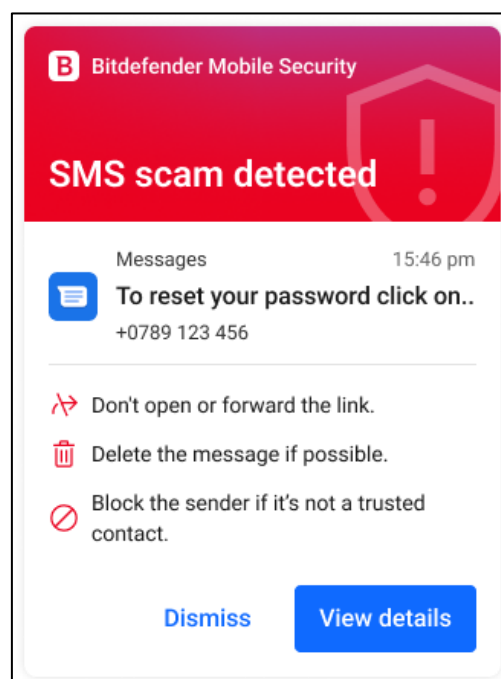

Web Scam Protection

- Protects you while browsing by blocking scam websites and detecting new scam patterns.

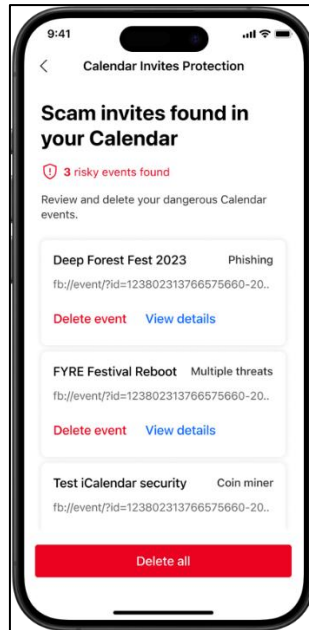

Email Protection

- **Web Email Protection:** Scans your webmail accounts (Gmail, Outlook) for phishing and scam emails. Web Email Protection works on all operating systems – just set it up on [Windows](#) or [Mac](#) to get started.
- **Local Email Protection:** Antispam for Outlook and Thunderbird email apps on Windows.

Mobile Protection

- **SMS Protection:** Scans incoming SMS messages for scams and dangerous links.
- **Scam Notification Protection:** Analyzes app notifications for scams (Android only).
- **Chat Protection:** Monitors chats in popular messaging apps WhatsApp, Facebook Messenger, Telegram, and Discord for scams (Android only).
- **Calendar Invites Protection:** Detect dangerous links in calendar events. (iOS only).

Remote Access Scam Protection

- Monitors remote access apps on Windows devices and warns you at the right moment – when you’re about to engage in online banking with a remote access tool running in the background:
 - A remote desktop access application is running on your Windows PC, even if there is no active remote session.
 - You are initiating a banking session, such as logging into your online banking account or accessing financial services.
- The Scam Prevention Alert lets you stop the remote access app from starting automatically with your system, ensuring it’s only active when you need it. This reduces the risk of these tools being exploited by scammers without your knowledge.
