

How to Install Bitdefender Web Protection (TrafficLight) on macOS

The Bitdefender Web Protection (TrafficLight) extension for macOS keeps you safe online by scanning the websites you visit for malware and phishing attempts. It blocks dangerous websites and warns you about unsafe links directly in your search results. Bitdefender TrafficLight supports the following web browsers:

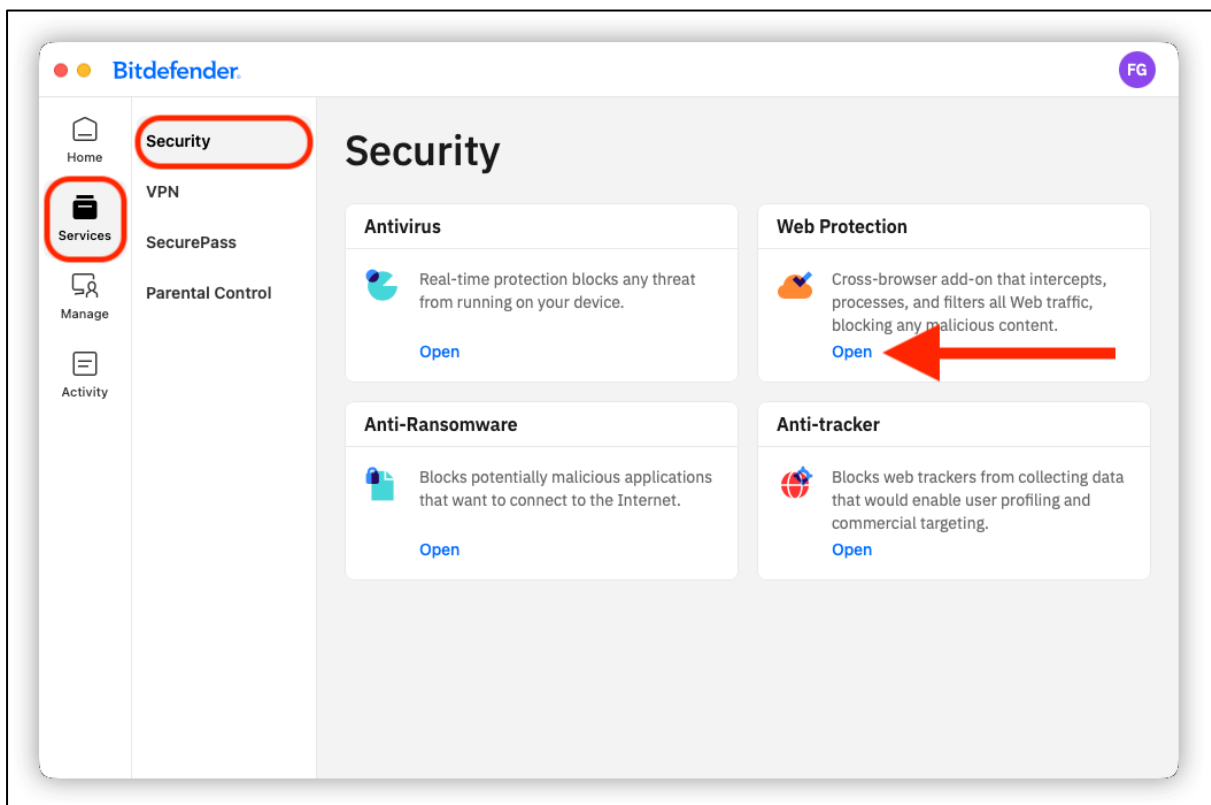

- Safari
- Mozilla Firefox
- Google Chrome

After [installing Bitdefender App on your Mac](#), follow the steps below to add the Web Protection (TrafficLight) extension to your browser.

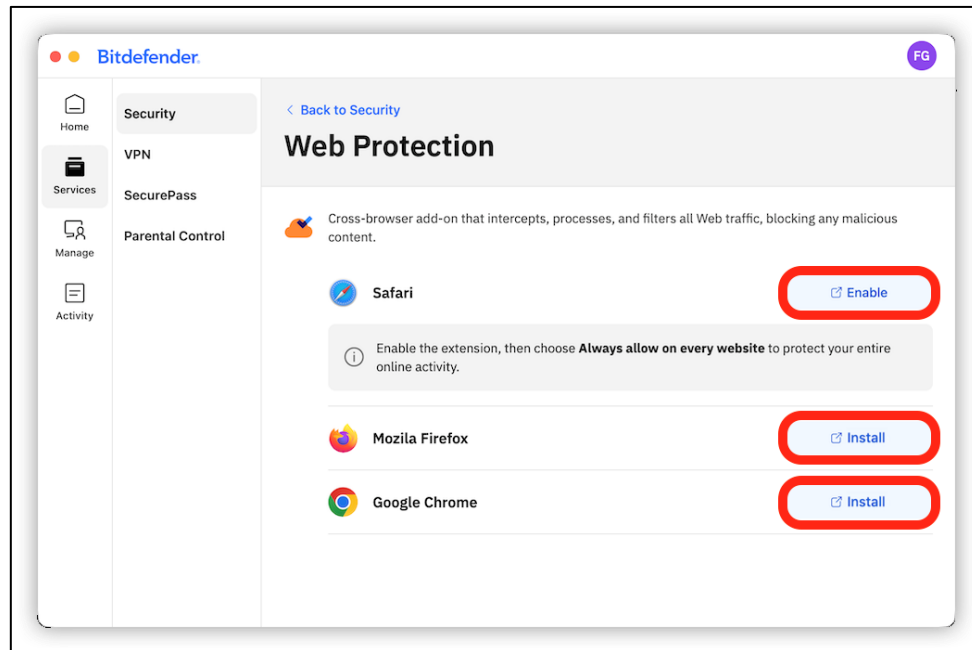

1. Click the **B** icon in the menu bar at the top right of your screen to open the Bitdefender app.

2. In the left-hand menu, go to **Services** → **Security** → open **Web Protection**.

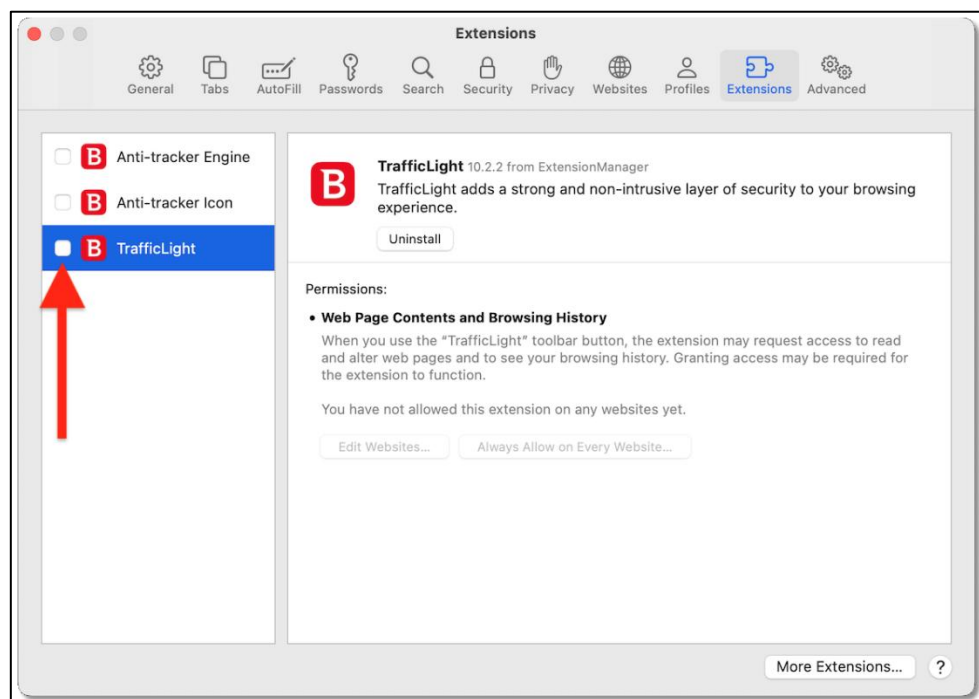

3. In the **Web Protection** panel, click **Enable** or **Install** next to your preferred browser (Safari, Firefox, or Chrome).
 - Only supported browsers that are currently installed on your Mac will appear in this list.

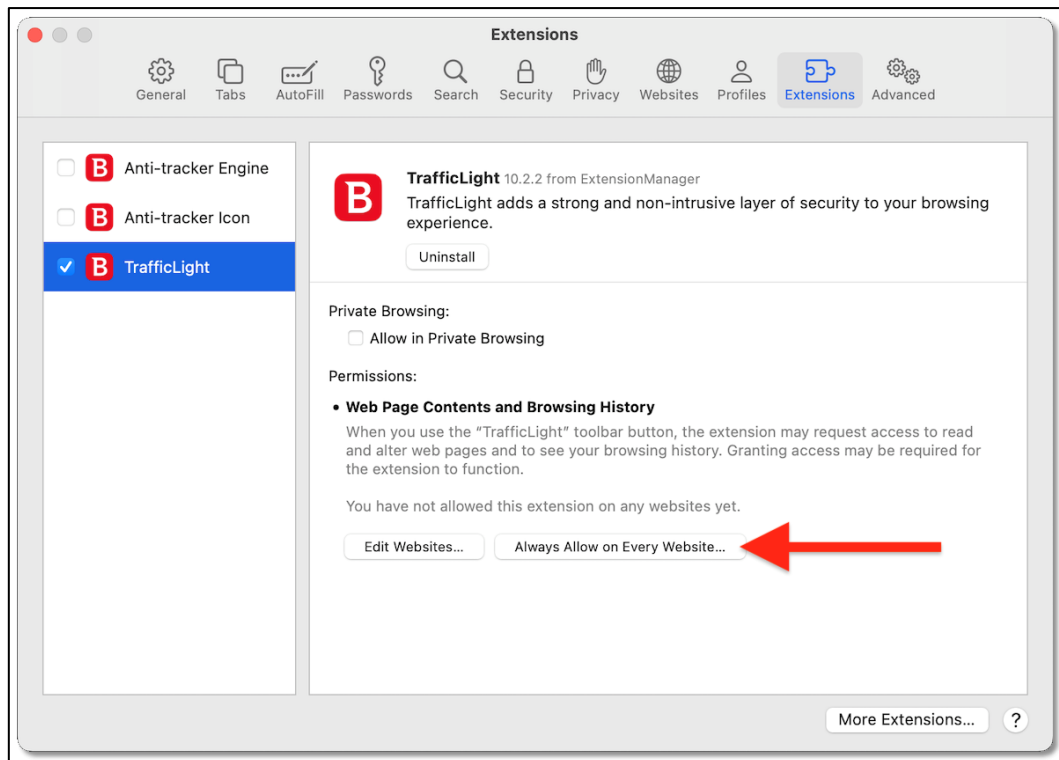

4. Follow the browser-specific instructions below to complete the installation.

Safari

5. After clicking Enable, the Safari Extensions window will open automatically.
6. In the menu on the left, check the box next to **TrafficLight** to turn on the extension.

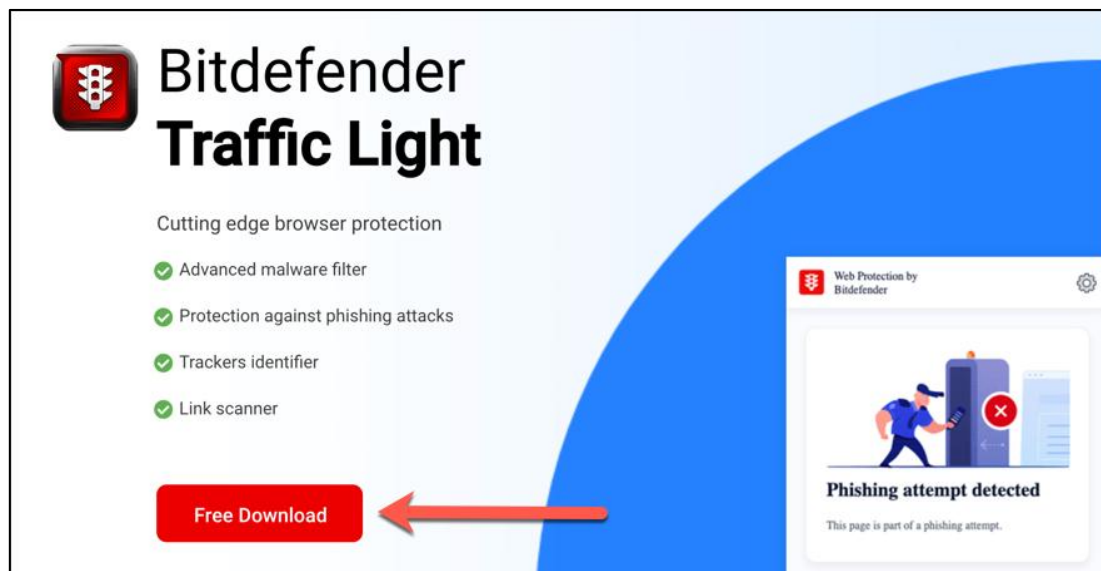

7. Click **Always allow on every website** to protect your entire online activity in Safari.

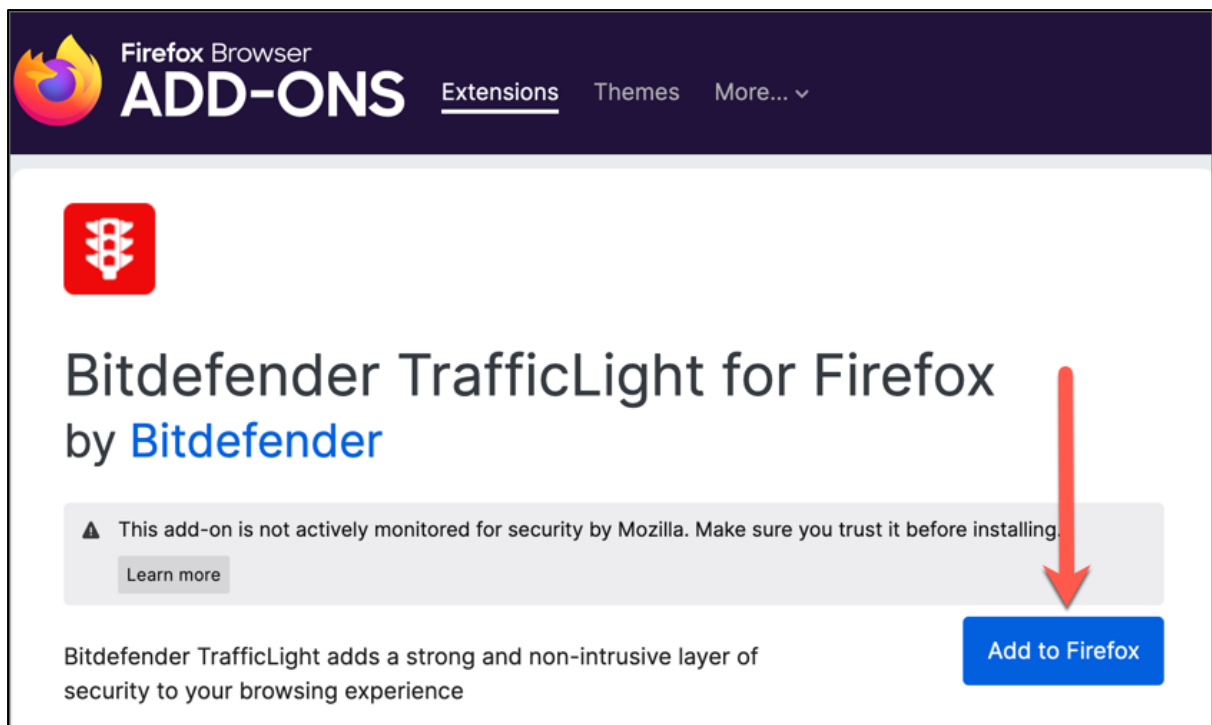

Firefox

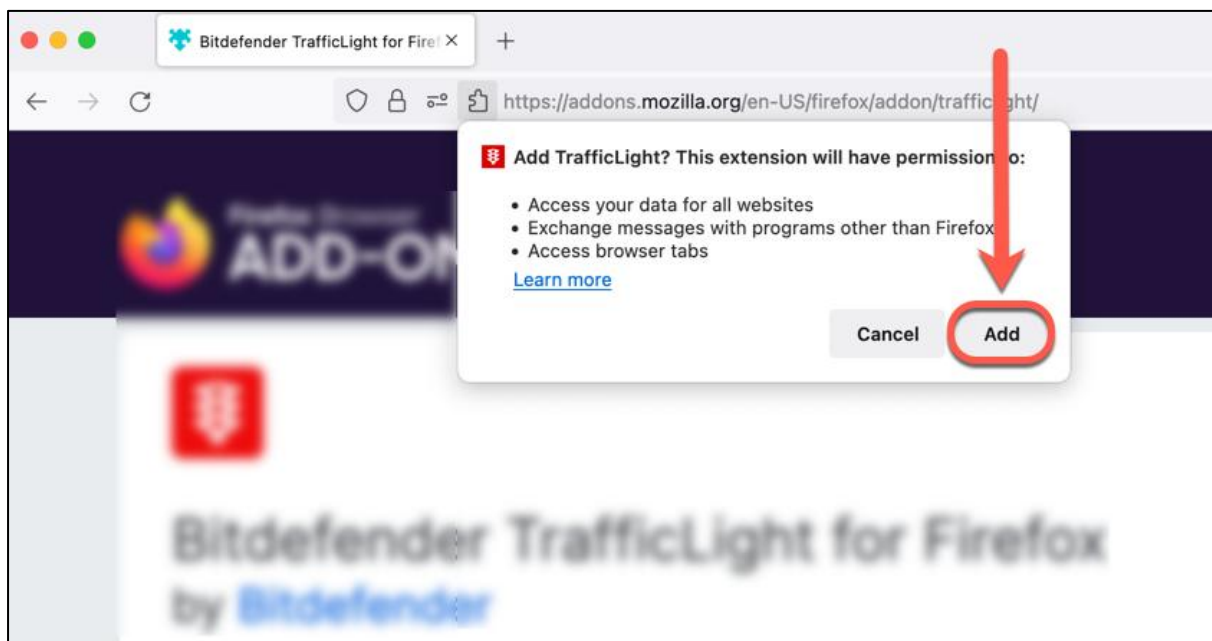

8. After clicking Install, the [Bitdefender Traffic Light page](#) will open in Mozilla Firefox. Click **Free Download**.

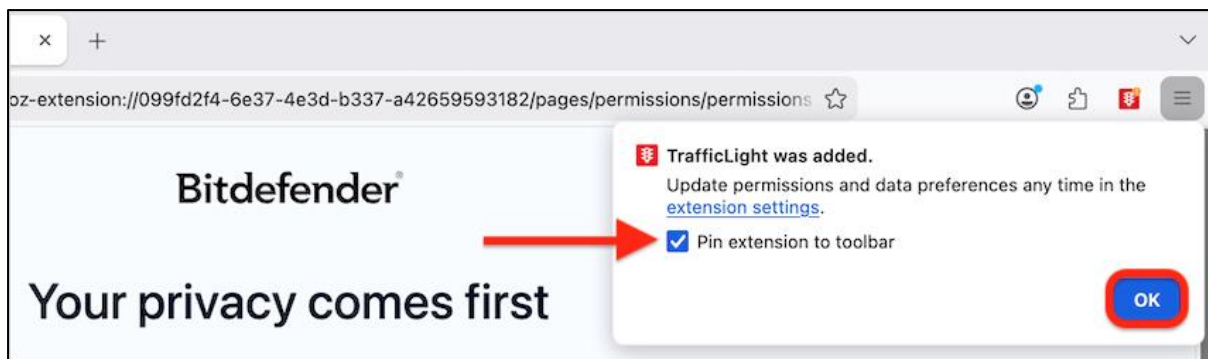

9. You will be redirected to the Firefox Add-ons gallery. Click **Add to Firefox**.

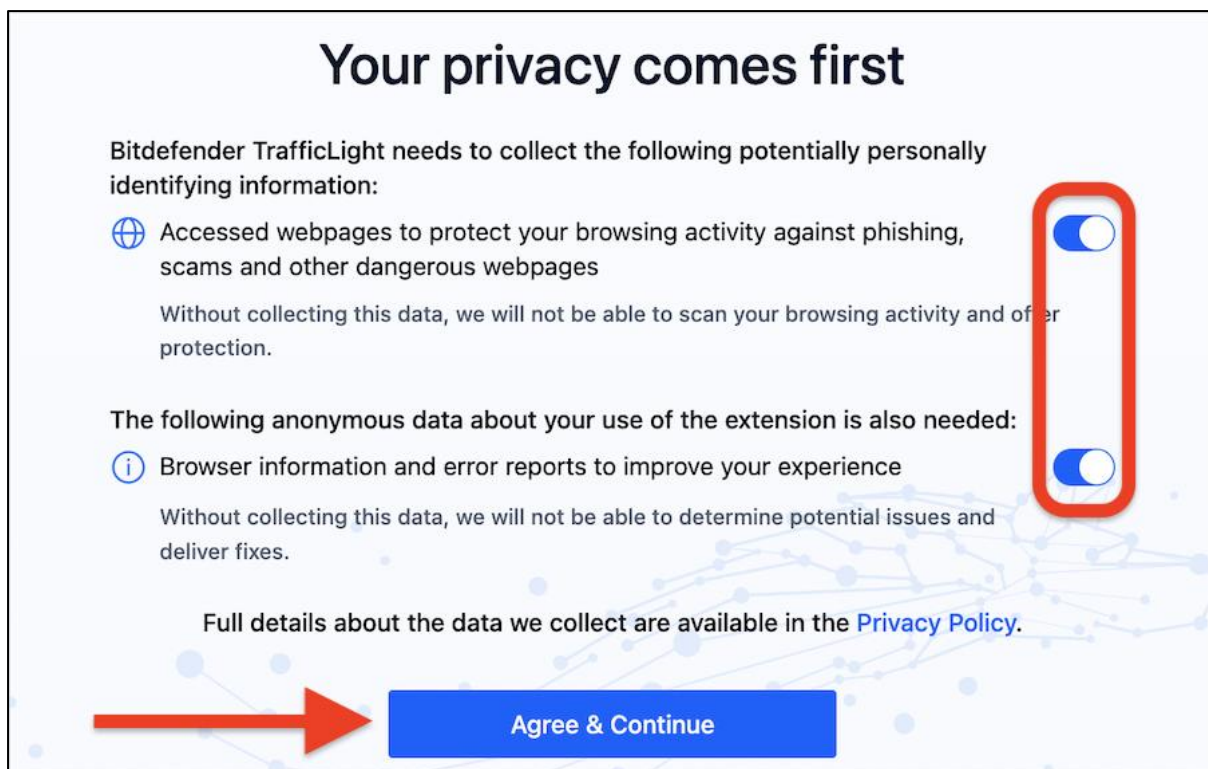

10. In the confirmation pop-up, click **Add** to install TrafficLight.

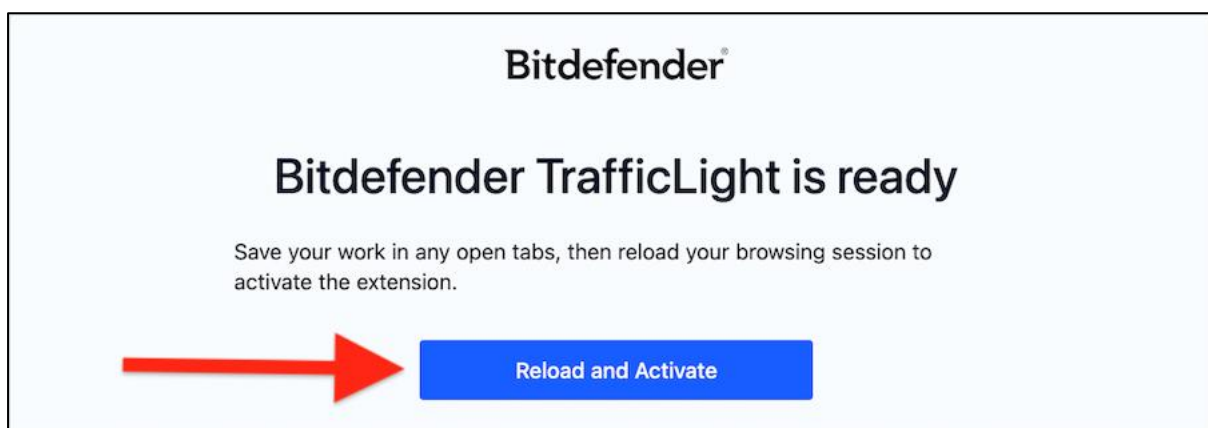

11. Check the **Pin extension to toolbar** box (optional), then click **OK**.

12. Enable all required permissions for Bitdefender TrafficLight to function correctly, then click **Agree & Continue**.

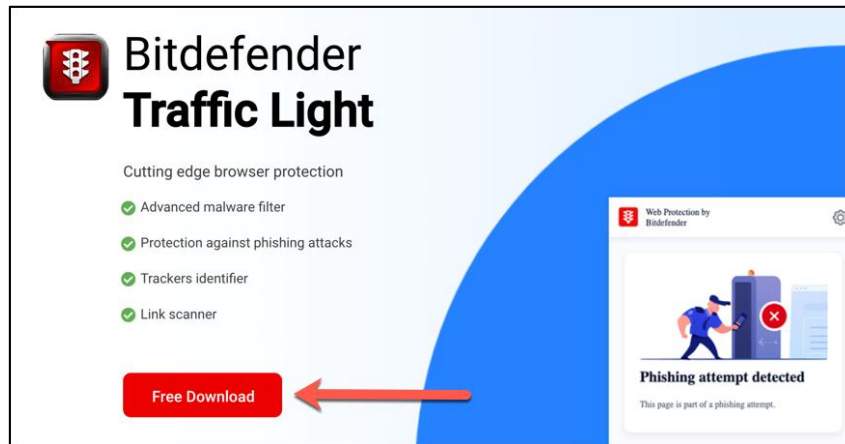

13. Save your work in any open tabs, then click **Reload and Activate** to refresh your browsing session and turn on the extension.

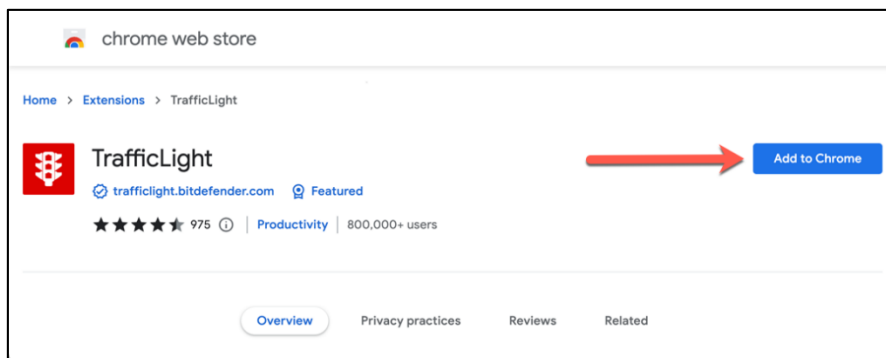

Chrome

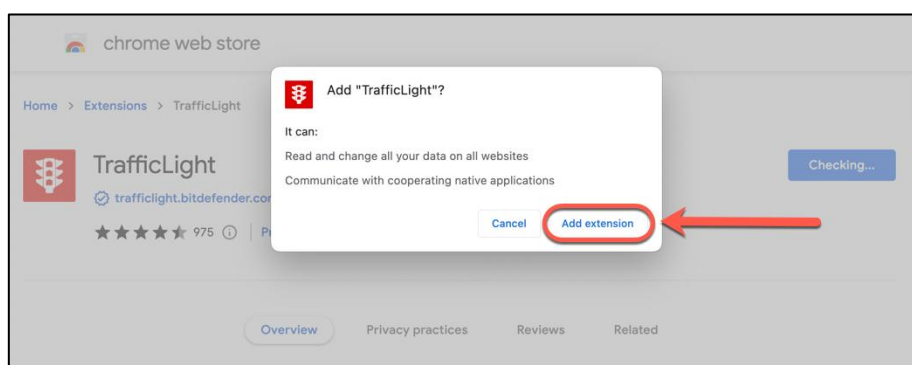

14. After clicking Get extension, the [Bitdefender Traffic Light page](#) will open in Google Chrome. Click **Free Download**.

15. You will be redirected to Chrome Web Store. Click **Add to Chrome** to install TrafficLight.

16. In the confirmation window, click **Add extension** to complete the installation.

Once the Bitdefender TrafficLight extension is enabled, you'll see a white checkmark inside a circle in your browser's address bar. This indicates that web protection is active and your macOS browsing is secured.
