

How to create a password-protected archive with Bitdefender Compress Tool

You can use the **Bitdefender Compress Tool** to create secured archives with malware samples. These can later be sent to our experts for further analysis.

To create a password-protected archive, simply follow the steps detailed below:

1. Click on [this link](#) to download and save the Bitdefender tool on your desktop.
2. Next, double-click to run the **Bitdefender Compress Tool**.
3. Now just drag and drop the infected files in the Compress Tool window and click on **OK** when you've finished.

4. A secure archive with the password "**infected**" (without quotation marks) will be created on your desktop. You can then send the resulted archive to Bitdefender as an attachment via e-mail.
